

WP5.7 Weighing System with Management Software

UNIQUE

Unique is the specially developed e-weigh registration software and minimum weight including TWO (Target Weight Optimization) software.

The tolerance range is automatically adjusted per weighing system / per component if the average weight of all weights deviates from the set target weight. This allows the give away to be reduced to an absolute minimum.

The weighing systems can be used both as stand alone and in combination with the Management Software.

EFFICIENCY

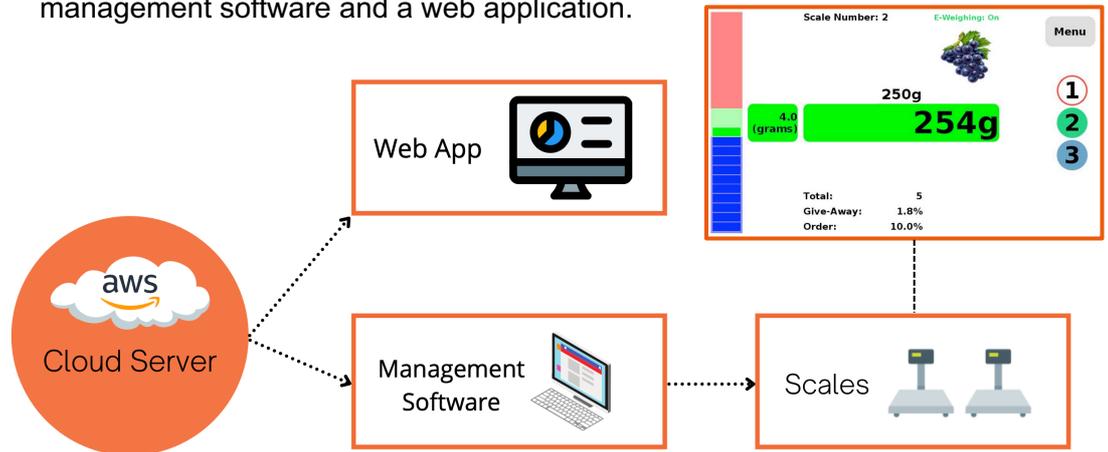

- Weighing is 25-30% faster
- High consistency of the components
- Minimum give away

BENEFITS OF SOFTWARE

- Shows efficiency of the entire line
- Operator performance data
- Weigh performance data
- Various reports & statistics
- Central start and stop of the line / weighing systems in seconds
- Possible via LAN or Wi-Fi

Dutch Weighing Company's WP5.7 weighing system is ideal for use in packhouses to fill or check the punnets with all kinds of food products. The system is particularly relevant for packaging companies that check the weight of fruit or vegetables.

The system operates in combination with our latest management software development "Atlantic Logic". This Amazon Cloud based solution ensures complete control over the efficiency of the production lines. Both via PC controlled management software and a web application.

Operators can easily work with the led bar system as integrated in the touch screen controller, that indicates when a punnet is within the tolerance area and can be processed. The last stable end weight will be stored in the management software, making operator and weigh performance available for reporting and statistics.

Specifications

Stand Alone Weighing Station	Touch Screen Controller
<ul style="list-style-type: none"> ▪ Constructed from stainless steel ▪ Capacity 3000 x 1g / 6000 x 2g ▪ Load cell 10kg C3 ▪ Cabling incorporated in the frame where possible ▪ Size of platform 240 x 300 mm ▪ Customization is possible ▪ Includes internal database for products, operators and results 	<p>The controller is equipped with a clear touch screen with LED bar that indicates when the weight falls within tolerance. The display (also available in 10") shows:</p> <ul style="list-style-type: none"> ▪ Operator name ▪ Tolerance area ▪ Number of weighings < -OK - > ▪ Number / kg / hour ▪ Photo of product ▪ RFID reader included – 13,56 MHz
